

6-Channel Speaker Adapter - MULTI

A 20-inch long audio adaptor:

6 1/4" TS phone plugs (Switchcraft 280) -> XLR 6-pin male right-angle plug (Neutrik NC6MRX)

Notes:

- 1.) Please use SWITCHCRAFT 1/4" plugs (barrel size must be narrow due to jack spatial arrangement)
- 2.) The tip from each phone plug should be connected to one of the 6 pins on the XLR connector.
- 3.) The shield/ground of all phone plugs should be tied together and connected to the ground flange on the XLR connector.
- 4.) Please label the phone jacks 1-6, reflecting the pin number.
- 5.) Please make sure that the right angle is oriented properly (pins should be along the bottom as jack faces down and towards you)
